

Alien Friends From Mars

By Aradhya Gupta, 4 Sariska, SNS GGN

One day, two aliens Kazooka and Bazooka from planet Mars visited Earth and landed in Gurugram city in India. While roaming around, they saw Earth looked very different. They found very few humans outside home, all wearing mask and silence everywhere. They wondered what has happened? They saw a girl named Aru, looking very sad and asked, "Hey! What's happening on Earth. Why are humans wearing masks?" Aru replied, "Hey, you don't know Corona Virus is spread all over the world."

Kazooka asked, "What is Corona virus?" Aru replied, "Corona is highly contagious virus which spreads quickly through coughing and sneezing. People fall sick and need hospitalisation. Millions of people have been infected and died."

Bazooka exclaimed, "Don't you have any medicines to cure it?" Aru replied, "No, vaccines so far. Doctors advised taking precautions like wearing mask, using soaps and sanitizers regularly and maintaining social distancing. World is under lockdown, schools are shut, can't meet friends or play in parks. Don't know when life will be normal."

Kazooka sympathized, "This is a difficult situation. Don't lose hope. You know human body has self defence system to fight viruses away. Build up your immunity, eat healthy food, maintain good hygiene and follow all precautions. Be a Super Hero and Fight Back the Virus. Everything will be fine soon." With this message both aliens bid goodbye and went back to Mars.

A loud sound woke up Aru and she found that she was dreaming but the conversation with aliens struck her mind. Aru started an online awareness campaign with her friends, made posters to educate people and helped in controlling the spread of virus, with the hope that scientist will find the vaccine soon.

Be a Corona Warrior. Let's fight COVID-19 together and make Earth Corona free!!
